

365 Command by Kaseya

Simple, Affordable and Comprehensive Cloud Administration for Microsoft® Office 365™

Simple, Fast Office 365 User Management

365 Command by Kaseya helps MSPs and IT Ops staff easily migrate, monitor, manage and report on their Microsoft Office 365 users, services and mailboxes from a single console.

With 365 Command, you can control Office 365, provision configure access to Mailboxes, OneDrive and SharePoint Online, edit permissions, access, create mailbox configurations, monitor usage of Exchange Online SharePoint, and generate reports for OneDrive, SharePoint, Skype for business, and more – from a single console.

Better yet, there's no need to master PowerShell scripting and Microsoft Office Azure Active Directory procedures. You can download and be using 365 Command in minutes.

Intuitive Administration Dashboard Saves Time, Reduces Errors

From provisioning to de-provisioning, it's never been easier to manage users and assign licenses for Office 365.

- Configure passwords as you want - reset passwords, require change at first login, or set it to never expire. These settings can be applied to multiple users at once.
- Assign or remove users from groups without having to go to each group you wish to modify – even if the user belongs to multiple groups at the same time.
- De-provision users and accounts with a few clicks in few minutes.

Simple, Customizable Cloud Mailbox Management

With 365 Command you can easily:

- Create custom templates to automatically assign settings to mailboxes after they are created, including password expiration, mailbox quotas, mailbox access, permissions and retention, time zone and language.
- View “member of” information and modify group memberships. Convert mailboxes between different types – full, shared, or resource – without writing PowerShell scripts.
- Enable archiving, auditing, and activating Litigation Hold at a mailbox or group level.
- Export or backup mailboxes to PST files in minutes with just a few clicks.

Comprehensive Reporting Delivers Visibility for Compliance, Governance and Security

365 Command goes far beyond the basic reporting capabilities of Microsoft's Office Portal or other third-party management offerings. By providing over 40 reports not available through Office Portal, Kaseya 365 Command gives you in-depth analysis and usage insight that you couldn't otherwise gain.

- **Increased Visibility:** See exactly how and where Office 365 is being used via auditing reports that show the number of users and mailboxes currently licensed and discover any old or unnecessary accounts.
- **Reduce Risk:** Get comprehensive reporting of who is using what features, and where and when they are being used. The extensive reporting and auditing of 365 Command means policy or security breaches can be caught early and rectified.
- **Role-Based Management:** Easily enforce policies through role-based administration. Granular access control limits what functions users can access in Office 365 and 365 Command.

Comprehensive Management of Office 365:

- Migrate accounts with the click of a button
- Set up new accounts (or delete them) in minutes, not hours
- Gain in-depth analysis and usage insight with out-of-the-box reports
- Manage users and accounts with group-level policy management
- Keep licensing records up-to-date for quick compliance audits

Take a Free Test Drive

See why thousands of IT pros and administrators use 365 Command to centrally manage and monitor their Microsoft Office 365 users from a single console.
